Projects

The Worst Tutorial Ever

PICO-8, Lua · *jackcarey.itch.io/worst-tutorial-ever*

- Built a solo game in ~940 lines of Lua: a five-lesson tutorial whose narrator gradually corrupts and turns on the player
- Engineered escalating control sabotage: swapped directions, locked backtracking, and buttons that remap every 3 seconds
- Scripted a "skip tutorial" button that never works, a fake patch-install glitch, and a graded end-screen certificate

Wikinaut

Python, Flask, JavaScript, NumPy, SQLite, Docker, Fly.io · *github.com/jackcareynapa/wikinaut*

- Built a space-themed Wikipedia game that charts the shortest link path between two articles and flies the player along it
- Extended a Flask API running bidirectional BFS over Wikipedia's full link graph with memory-mapped CSR arrays
- Rebuilt the multi-GB data pipeline in Python 3 for Wikipedia's 2024 schema change, which silently broke upstream builds
- Solved live-page link matching across redirects, two page renderers, and collapsed sections, with a direct-URL fallback
- Deployed a Dockerized API on Fly.io with GitHub Actions CI and pytest suites for path correctness

Meme Studio

Next.js, AWS Lambda, Amazon S3, OpenAI API · *github.com/jackcareynapa/serverless-meme-generator*

- Built a serverless meme generator: OpenAI captions, presigned direct-to-S3 uploads, and an S3-triggered Lambda renderer

Experience

Software Engineer Intern, Jun 2026 - Aug 2026

Everything Set, St. Helena, CA

- Planned the migration of a HIPAA-regulated, 640M-document Elasticsearch cluster to Amazon OpenSearch; found 390 of 394 indices could not be snapshot-restored and designed a reindex-from-remote approach
- Kept AWS costs down by right-sizing the cluster, skipping a ~$348/month warm tier, and archiving to S3 Glacier
- Documented the full system architecture (Lambda, EKS, IoT Core, Auth0) using Claude Code to mine Slack and Miro
- Refactored legacy services and traced bugs across the codebase using Claude Code and Cursor

Full Stack Developer, Oct 2025 - Present

TerraBid, Remote

- Build AI agents that help landowners draft contracts and offers for solar development
- Build front-end interfaces and integrate REST APIs for a platform comparing renewable energy developers
- Redesigned platform navigation to streamline key user flows, increasing user engagement and retention

Education

Bachelor of Science: Computer Science, Aug 2023 - May 2027

Duke University, Durham, NC · Study Abroad: University of Sydney, Fall 2025

- Concentration: Artificial Intelligence & Machine Learning · Minor: Theater Studies
- Activities: Pi Kappa Alpha Head Social Chair, Duke University Improv President, Hoof 'n' Horn, Creator Lab

Skills

Languages: Python, JavaScript, Lua, Java, C, SQL, HTML/CSS
Frameworks: React, Next.js, Node.js, Flask, NumPy, scikit-learn, pytest, Tailwind CSS
Cloud & Data: AWS, GCE, Elastic Cloud, Docker, Fly.io, Vercel, SQLite
Tools: Git, GitHub Actions, Claude Code, Cursor, PICO-8, Unity
